Forensic Science

Fibers - UCF NCFS

The processing of fibre evidence in the forensic science laboratory can be divided into recovery, identification, comparison and evaluation. This article reviews each of these aspects in detail, illustrating how fibre examination has developed over the past two decades.

We use a variety of instruments during fiber examinations, all of which consist of a microscope. Figure 1 is a comparison photograph taken under a microscope of fibers in question and fibers from a known source. Figure 1. Ropes and cordage may also be submitted to the Laboratory for analysis.
